1 INTRODUCTION

1.1 Purpose

The main objective of this release SDT main application version 6.0.5 is to resolve an issue in the existing application and make addition of new components to the SDT Component Library. The major change to the SDT Component Library 6.0.1 is that there is an addition of 2 missing devices to the library. So, there are changes in both SDT main application as well as SDT Component Library. Hence there are two different setup files available for the complete SDT installation.

This document will guide through the installation process of SDT main application setup.
